

Model F-1 Filter

This Parker compact series compressed air filter is designed to remove water and solid particles from your compressed air system prior to air entering the AB-CO PURGE purge and pressurization system. The polycarbonate bowl resists grease, oil, detergent, and most inorganic acids and has high impact resistance. It is rated at 40 micron for contaminant and particle reduction. The filter's unique deflector plate with shroud makes the air stream swirl thus ensuring that water and dirt are effectively separated. The filter is suitable for manufacturing process environments.

FEATURES

- **Compact Configuration (H = 6.27" x W = 2.74")**
- **1/4" F-NPT Port/Connection**
- **40 Micron Element (Particle Retention Size)**
- **Pressure Flow Rate: 53 SCFM (Standard Cubic Feet/Minute)**
- **Temperature Rating: 32°F -- 125°F**
- **Polycarbonate Bowl with Metal Bowl Guard**
- **Large Filter Element Surface for Low Pressure Drop and Increased Element Life**
- **Manual Twist Drain Style**
